action completed
on 7/11/21

10-11/55 morning
10-11/55

10/11/25.

AML.

ANC induction received from 29/10 to 6/11.

Now c/o abdominal pain x 1 day
c/o loose stools x 1 day.
c/o cold and cough x 3 days.

No fever.

O/E: Vitals: stable.
chest B/L conducted sounds +
P/A: SpR.
Mucosa: (N).

Perjuno
SR.

8/11 CBC
7.4 $\frac{2620}{1510}$ 20,000.

Advice:

1. Go to ER stat: if/so impending FN.
2. To do: CBC, Blood c/s, VBG, CXR, Stool w/u.
3. if ANC < 500 or on a declining trend: KS start IV Antibiotics and do usg Abdomen to r/o NEC.
4. Ped Onco SR will review.
5. OPD: 12/11/25.

Baseline disease

Date of diagnosis:
Karyotype: t(8:21)
Molecular
workup:

Initial
stratification: favourable risk risk

Therapy
received: 2 course ADE → 2 course HIDAC
last dose 9/3/26

Details at relapse

Date of relapse: 1/8/26
Duration < 6 months of
CR:

CBC: 8.2 2820 18k High risk
120

PS:

BMA:

Flowcytometry:

- If remission is achieved, particularly with MRD negativity, allogeneic HSCT should be pursued whenever feasible.
- Azacitidine in combination with venetoclax can serve effectively as a bridge to HSCT, providing disease control until transplant.
- For patients who are not candidates for HSCT, continuation of azacitidine-venetoclax therapy may be considered, either as extended cycles or as maintenance therapy, provided it is well tolerated.

Number of Cycles

- Each treatment cycle consists of 28 days. Following completion of one cycle, a 7-day interval should be observed before initiating the subsequent cycle.
- **Response assessment:** Bone marrow evaluation, including MRD analysis, should be performed at the end of Cycle 1 (or after Cycle 2 in cases of delayed response) to determine treatment efficacy.
- **Treatment duration:** Therapy may be continued for up to 4-6 cycles, guided by treatment response and the patient's tolerance to therapy.

AZA - VEN Protocol,
